Specification

1. The abstract of the disclosure is objected to because legal phraseology have been used. The legal term "comprises" were used in the abstract and correction is required. See MPEP § 608.01(b).

Double Patenting

2. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

3. Claims 42-66 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-25 of U.S. Patent No. 6,645,240. Although the conflicting claims are not identical, they are not patentably distinct from each other because the claims 42-66 of the application recite the same inventive system for delivery and deploying a prosthesis as is the claims 1-25 of U.S. Patent No. 6,645,240. All the claims in both application and patent call for system for delivery and deploying a prosthesis having a graft, an underlying stent, a first member

Art Unit: 3738

for releasably retaining at least a portion of the underlying stent and at least a second, non-sheath member for releasably retaining at least the free end of the graft.
